Professional Summary

Data Engineer at Oracle with experience in building scalable ETL pipelines using ODI, SQL, and PL/SQL for large-scale financial data systems. Skilled in Python, PySpark, and cloud technologies with hands-on experience in machine learning and LLM-based applications including RAG systems.

Experience

- **Oracle** — *September 2025 – April 2026*
  Application Developer — *Bangalore, Karnataka*
  - Built scalable ETL workflows for financial data using ODI 12c mappings and PL/SQL procedures, packages, and variables.
  - Improved ADW data replication performance by ~89%, reducing execution time from 12 hours to 1.3 hours through SQL optimization.
  - Designed and implemented new fact tables and data models for revenue processing and transformation.
  - Built and executed ODI scenarios to orchestrate end-to-end ETL workflows.
  - Collaborated with cross-functional teams to gather requirements, design solutions, and deploy scalable data workflows in production environments.
  - Managed end-to-end ETL lifecycle, including development, testing, deployment, and validation, while maintaining documentation in Confluence and handling task tracking through Jira.
- **Oracle** — *January 2025 – August 2025*
  Project Intern — *Bangalore, Karnataka*
  - Developed Oracle APEX applications with interactive dashboards (charts, bar graphs) and automated workflows using job schedulers.
  - Built an Oracle APEX application integrating a chatbot using APIs and a Retrieval-Augmented Generation (RAG) system to enable context-aware and intelligent user interactions.

Skills

Programming: Python, SQL, PL/SQL,C
Data Engineering: ODI 12c, ETL, Data Warehouse, Data Modeling
Big Data & Cloud: PySpark, Azure, AWS
Tools: Oracle APEX, Power BI, Git, CI/CD, Linux
AI/ML: Machine Learning, LangChain, LLM Finetuning, RAG

Education

- **Master of Technology in Computer Network and Engineering, CGPA: 8.50** — *2023 – 2025*
  M S Ramaiah Institute of Technology — *Bangalore, Karnataka*
- **Bachelor of Engineering in Computer Science and Engineering, CGPA: 7.69** — *2019 – 2023*
  SDM Institute of Technology — *Bangalore, Karnataka*

Projects

- **DDoS Detection using GAN and Deep Learning**
  Deep learning-based intrusion detection using GAN-generated synthetic data
  - Developed a DDoS detection system using GAN (WGAN-GP) and deep learning models, achieving 99.04% accuracy with BiLSTM.
  - Applied data augmentation using GAN to handle class imbalance and improve model robustness.
  - Processed network traffic data into sequential windows to capture temporal dependencies.
  - Technologies Used: Python, TensorFlow, GAN (WGAN-GP), BiLSTM, GRU, RNN, Pandas, NumPy.
- **Fake News Detection using RoBERTa and DistilBERT**
  NLP-based system for detecting fake news using fine-tuned transformer models
  - Developed a fake news detection system using fine-tuned RoBERTa and DistilBERT models, achieving 78% accuracy.
  - Performed text preprocessing and model fine-tuning to improve classification performance on real-world datasets.
  - Technologies Used: Python, HuggingFace Transformers, RoBERTa, DistilBERT, Pandas, NumPy.

Paper Publications

- **"Integrating Deep Learning with Ensemble Approach for Anomaly Detection" – IEEE Xplore**:
