## PROFESSIONAL SUMMARY

**Software Engineer** with **3+ years of experience** in designing and developing distributed microservices, **event-driven backend systems** in the **Fintech domain**. Skilled in **Java and Spring Boot microservices**, high-throughput payment processing, and **asynchronous messaging using RabbitMQ**. Proven track record in optimizing performance, resolving production issues, and designing fault-tolerant workflows for large-scale transaction systems.

## SKILLS

**Languages & Fundamentals:** Java, Python, JavaScript, SQL, DSA (Data Structure and Algorithm), OOP, DBMS, SOLID Principles, SDLC, Design Patterns

**Frameworks & Architecture:** Spring Boot, Hibernate/JPA, JDBC, Spring Batch, Spring Security, Spring Cloud, REST APIs, OAuth, JWT, Microservices, Event-Driven Architecture, Saga Pattern

**Messaging & DevOps Tools:** RabbitMQ, Kafka, Kubernetes, Docker, Airflow, Jenkins, Maven, CI/CD pipeline, JUnit, Mockito, Vault, Elasticsearch, Kibana, Grafana, Splunk, AWS S3

**Databases & Version Control:** PostgreSQL, MySQL, NoSQL, MongoDB, Redis, Caching, Git, GitHub

**Frontend:** ReactJS, AngularJS, Bootstrap, HTML, CSS, Javascript

**AI Tools:** GitHub Copilot, AI Agents, ChatGPT, Claude, Gemini, Grok

## PROFESSIONAL EXPERIENCE

**Societe Generale Global Solution Center - Bangalore, India**

July 2023 – Present

*Software Engineer - Java Developer*

- Enhanced payment pipelines across a distributed ecosystem of **35+ microservices**, delivering regulatory features and **stabilizing production systems** during critical incidents.
- Built scalable backend services using **Java, Spring Boot, PostgreSQL, and RabbitMQ**, enabling **asynchronous event-driven communication** and **resilient message processing**.
- Developed a **centralized orchestration service** using the **Saga Orchestration pattern** to coordinate end-to-end payment flows across multiple services, ensuring **data consistency and fault tolerance**.
- Optimized large XML file handling (50MB+) by introducing **streaming-based parsing**, cutting heap usage by **50%** and improving garbage collection (GC) performance.
- Containerized microservices using Docker and orchestrated deployments on Kubernetes**, implementing auto-scaling (HPA), rolling updates, and health checks, improving system resilience and **maintaining 99.9% uptime for compliant critical systems**.
- Optimized PostgreSQL query performances** by resolving N+1 patterns and tuning indexing strategies, boosting database efficiency and **reducing latency by 65%**.
- Designed a robust **Spring Batch pipeline** to process **50,000+ daily payments**, integrating Airflow and RabbitMQ with chunk-based processing and restartable execution.
- Leveraged **AI-assisted development** tools to automate test generation and refactoring, improving development efficiency while reducing manual effort.

## PROJECT

**Mini Jarvis -Personal AI Assistant**

- Developed an **AI-powered personal assistant** leveraging **Natural Language Processing (NLP)** to handle user queries and automate daily tasks.
- Integrated external APIs to enable **real-time data retrieval** (e.g., weather, search, automation workflows).

## PROFESSIONAL ACHIEVEMENTS

Received the **SPOT Award** for resolving critical production defects in the CASHFIT program, **preventing potential financial losses exceeding €50M**.

## EDUCATION

**SDM Institute of Technology**

June 2019 – June 2023

Bachelor of Engineering in Computer Science and Engineering

**CGPA: 8.5**
